PivetTrack

VALUE PROPOSITION · 2026

ENTERPRISE-GRADE WMS · MIAMI, FLORIDA

Know in minutes which customer got every lot.

PivetTrack follows every lot to your customer, **ships the earliest-expiring lot first** and sends every transaction to **your QuickBooks Online**, with nothing keyed twice. Measured under pressure, not promised in a brochure.

120
picking operators active at once, the contract limit

293ms
p95 latency with 120 operators, over 15 minutes at that load

165,382
SKUs in a count closed while 20 operators kept shipping

0/6,176
failed requests while that count was closing

01 THE MONEY THAT DISAPPEARS

Warehouses don’t lose money all at once. They lose it little by little.

That missing percentage when you build the pallet isn’t a typo. It’s **an order that doesn’t ship, a customer who walks and a margin that evaporates** without a trace. And it always happens at the worst possible moment.

> **Why does your system guarantee 100% of the stock is ready to ship, yet when it’s time to build the pallet you’re always missing that critical percentage that stalls your sales?**

The stock that isn’t there

The system shows stock the warehouse doesn’t have. Adjustments happen with no document and no owner, and the gap grows at every count.

Cost: short orders and customers who don’t come back.

The close that freezes

Month-end, and the whole team logs in at once. Screens spin, pickers wait, trucks wait. Revenue waits.

Cost: hours of downtime on your busiest day.

The margin that lies

A return booked at a rough guess contaminates your average cost. From then on, every margin is calculated on a false number, and no one knows.

Cost: pricing and purchasing decided on bad data.

Operations in one person’s head

Parallel spreadsheets, broken formulas and one person who “knows where everything is.” A resignation or a vacation becomes a crisis.

Cost: continuity and control of your most expensive asset.

Your ERP was not built for the warehouse. It was built for the accountant. Your warehouse pays the price.

PivetTrack was born right there: on the warehouse floor, where inventory truth is won or lost, **one box at a time**.

Fast, and at scale
120 active operators at 293 ms and 167,382-line counts.
→ pp. 3–4

Lots and recalls
Who got every lot, in minutes.
→ p. 5

True cost and QuickBooks
No false margins, no double entry.
→ pp. 6–7

02 A STRESS TEST, NOT A BROCHURE

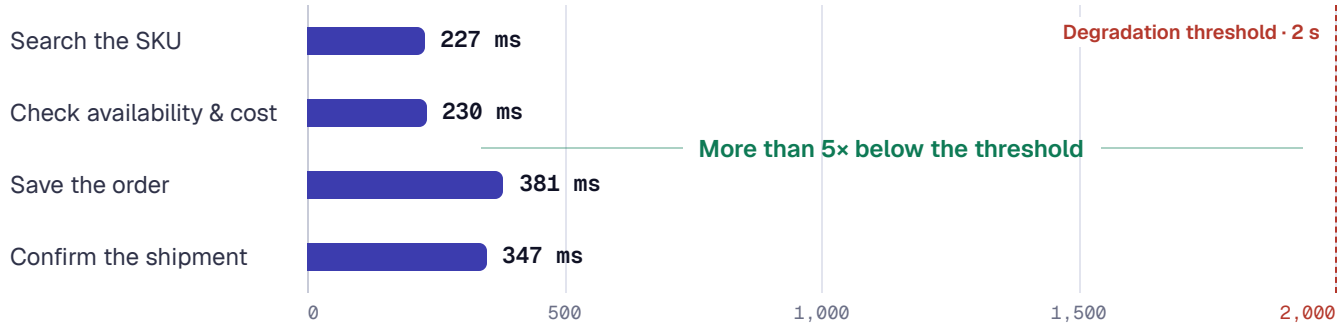

Every vendor says their system is fast. We show you the measurement.

We put PivetTrack through a stress test in a production-identical environment, with **more than 300,000 shipments in the history**: **real picking**, with operators searching, saving and confirming shipments against the same SKUs at the same time.

120	34,214	0%	293ms
picking operators active at once	picking requests in the 15 minutes at that load	error rate: zero server failures	p95 latency with 120 operators

Response time for each picking step

p95 with 120 active operators · milliseconds

How far it goes

With 120 active operators, the contract limit: **293 ms** (p95), zero errors. An earlier run reached 240, the ceiling of a standard deployment and already queuing: **1.56 s**, also error-free. Between 120 and 240, times vary from run to run, which is why we don't guarantee them. By contract: up to 120 users and a p95 of up to 0.5 s in *picking*, with conditions (p. 11).

Integrity under pressure

4,243 of 4,243 shipments confirmed correctly, competing for the stock of the same 20 SKUs. No duplicate or missing folios, and the stock of all 20 SKUs reconciled at the end. Zero server errors in 46,904 requests.

WHAT IT MEANS FOR THE BOARDROOM

95 of every 100 system responses arrived in under three tenths of a second, with 120 operators active at once and without a single failure. **Operations don't stop under fire, and that is not a promise: it is a measurement.**

Methodology: k6 against a staging clone of production (its own server and database, with the same resources and region), a single 15-minute run at 120 operators, Nov. 3, 2026: picking in one warehouse, with operator pauses and no reports or count closes at the same time; more than 300,000 shipments in the history, 20 SKUs, and MFA off during the run. It is a range, not a fixed figure: other windows that day gave 170 to 261 ms measured at the server, and this run's worst minute was 636 ms. Technical summary available on request.

03 SCALE WITHOUT THE FREEZE

On full-count day, your system shouldn't ask you for patience.

Bulk loads and inventory close are where systems break. In PivetTrack they run **in the background** and your team keeps working.

167,382
lines in one full count, 15,526 with lots

219ms
picking p95 while it was closing

0
failed requests out of 6,176 during the run

229s
to close all 167,382 lines, in a single attempt

Upload the spreadsheet and keep working

Files over 5,000 rows (products, counts or price lists) are imported in the background.

The close advances in batches

A large count is confirmed in blocks of 1,000 lines, with the progress percentage on screen and an email when it's done.

If anything is interrupted, it resumes on its own

A restart or an update leaves nothing half-done: the job picks itself back up, without duplicating or skipping a single movement.

Screens that don't choke

Details, printouts and results are paged, with totals computed in the database: 164,000 lines browse just like 60.

PICKING P95 WITH 20 OPERATORS

219ms	235ms	268ms	2,000ms
one close in progress	two closes at once	worst minute	degradation threshold

WHAT IT MEANS FOR THE BOARDROOM

With 20 operators shipping, a 167,382-line full count closed in 229 seconds. **Not a single request failed.**

TWO PLANS ON THE SAME PLATFORM

FOR MID-SIZE AND LARGE OPERATIONS

Standard Plan

The background processing engine is included, with no extra servers and no added fixed cost: massive catalogs, batch imports and counts of over 160,000 lines, with no SKU cap in the contract. **$800 a month, unlimited users.**

FOR HIGH CORPORATE CONCURRENCY

Enterprise Plan

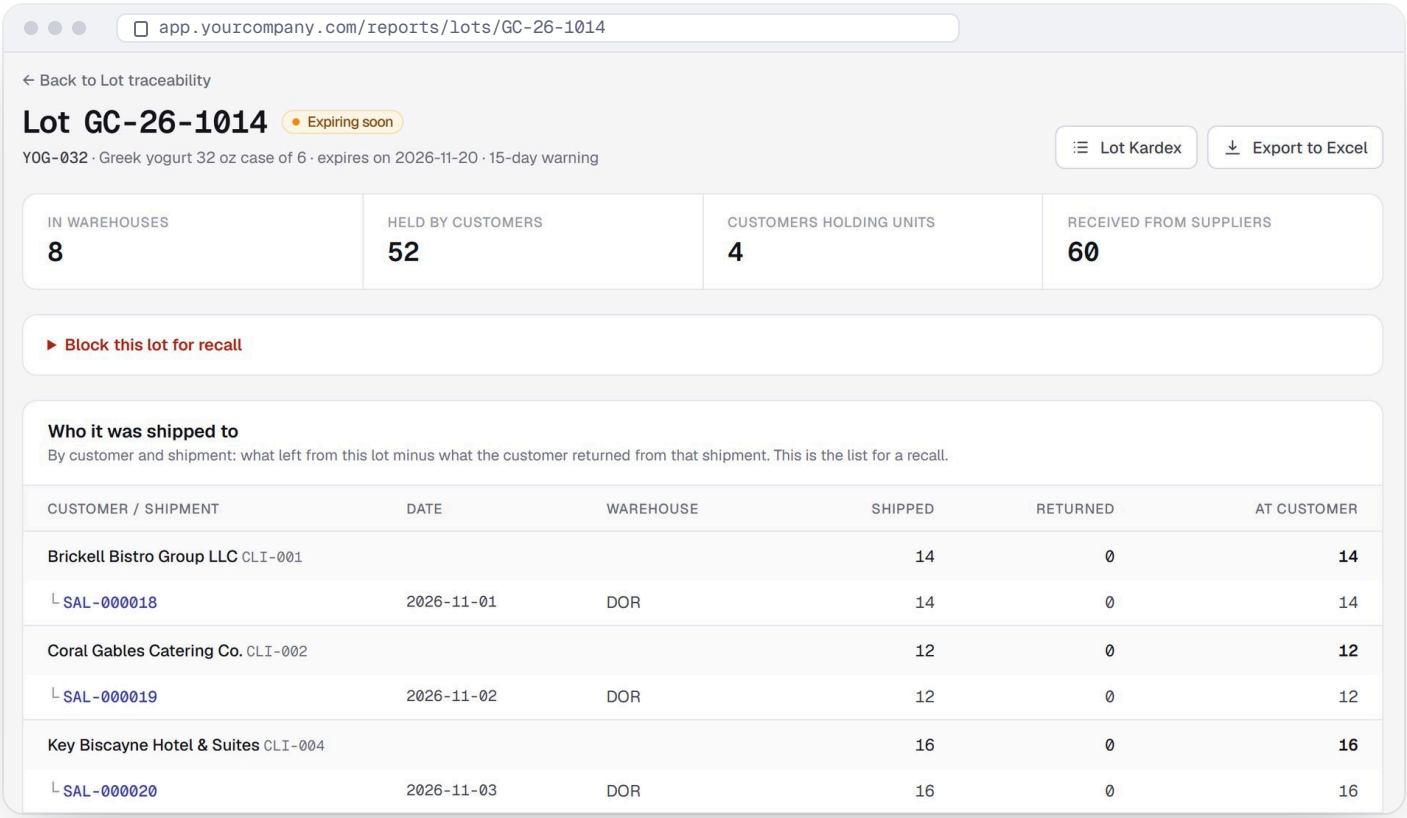

When several teams import and close very large inventories at once: real-time queues and dedicated processing servers, with priority support. **Built and quoted to order, after an audit of your operation.**

Methodology: staging on PostgreSQL; each figure, a single run. Oct. 14, 2026, no other users: a 164,382-product master and a 164,382-line count, each imported in ~20 s. Oct. 29, a catalog of 165,382 SKUs in stock: 20 picking operators simulated in k6 and, at minute 3, the close of a full count with a difference on every line: 229 s, 0 failures in 6,176 requests. Two such counts at once: 356 s, 0 failures in 6,196. Opening a new shipment during the close: 0.2 s p95.

04 LOT TRACEABILITY

A supplier flags a bad lot. How long does it take you to know who you sold it to?

In PivetTrack, one click. Every unit comes in with its lot and expiration date, and every shipment is tied to the lot it left from. **Your recall list is ready before you hang up the phone.**

Real PivetTrack screenshot. Greek yogurt lot GC-26-1014: 60 cases received from Gulf Coast Foods, 52 already with four customers, with the shipment and date of each, and 8 still in the warehouse. One more click and it is all in Excel.

Automatic FEFO
The lot that expires first ships first. A customer shipment never takes an expired lot.

Expirations in sight
A nearing-expiration report, with warning days per product and an alert on the Dashboard.

Blind two-step receiving
The office enters the invoice; the floor declares lots and quantities without seeing what was expected.

Double-checked shortages
Every difference is verified by another Administrator, in their own session or co-signing with their 2FA code, then closed with a credit, a replacement or a write-off.

Returns to their lot
A customer return goes back to its lot; a supplier return leaves from the lot it came in with.

Ledger by lot
Every movement of the lot, with its document, its author and its balance.

PivetTrack records traceability from the data your team enters and supports your product recall processes. It does not replace your obligations to the FDA or under other health regulations: complying with them is your company's responsibility.

05 SURGICAL REVERSE LOGISTICS

Other systems process returns. PivetTrack returns precision.

Many systems restock returns at today's cost. That mistake contaminates your **Weighted Average Cost (WAC)** and distorts every future sale.

An example with a single SKU. You hold 200 units at a WAC of $12.00. A customer returns 100 units that shipped when they cost $10.00.

TYPICAL SYSTEM

Restocks at today's cost: **$12.00**

Inventory	300 units · $3,600
Resulting WAC	$12.00

$200 of phantom inventory from a single return, and every unit sold afterward is costed $0.67 too high.

PIVETTRACK

Restocks at the cost recorded when it shipped: **$10.00**

Inventory	300 units · $3,400
Resulting WAC	$11.33

Exact to the cent: your average cost reflects what you actually paid.

app.yourcompany.com/reports/stock-ledger

CAF **Premium ground coffee 5 lb**
CAF-005 · Unit · DOR: 177, HIA: 66

TOTAL STOCK	CURRENT WAC	MOVEMENTS
243	$ 18.65	10

2026-11-04 11:00	Shipment	SAL-000007	DOR	Little Havana Market Inc.	-12	$ 18.65	$ 18.65	226	$ 4,214.57
2026-11-06 09:00	Shipment	SAL-000011	DOR	Brickell Bistro Group LLC	-20	$ 18.65	$ 18.65	190	$ 3,543.22
2026-11-06 09:45	Shipment	B2B-2	DOR	Brickell Bistro Group LLC	-16	$ 18.65	$ 18.65	210	$ 3,916.19
2026-11-06 13:00	Shipment	SAL-000013	DOR	Wynwood Coffee House LLC	-16	$ 18.65	$ 18.65	174	$ 3,244.84
2026-11-06 16:00	Return	DEV-00001	DOR	Brickell Bistro Group LLC	+3	$ 18.40 (1)	$ 18.65 (2)	177	$ 3,300.25

Showing 1–10 of 10

Real PivetTrack screenshot. (1) Return DEV-00001 restocks at $18.40, the exact cost recorded when it shipped on SAL-000001, even though coffee costs more today. (2) Only then is the WAC recalculated, with the true figure: $18.65, uncontaminated.

Immutable stock ledger
Nothing is edited or deleted: corrections are a new document.

Duplicate invoices, blocked
Entered twice? The second user sees which receipt already has it.

Supplier returns
At the original invoice cost, so they match the credit memo.

Frozen during counts
Open count: no document changes in that warehouse.

Cost under lock and key
Only an Administrator adjusts the WAC, with a reason and an audit trail.

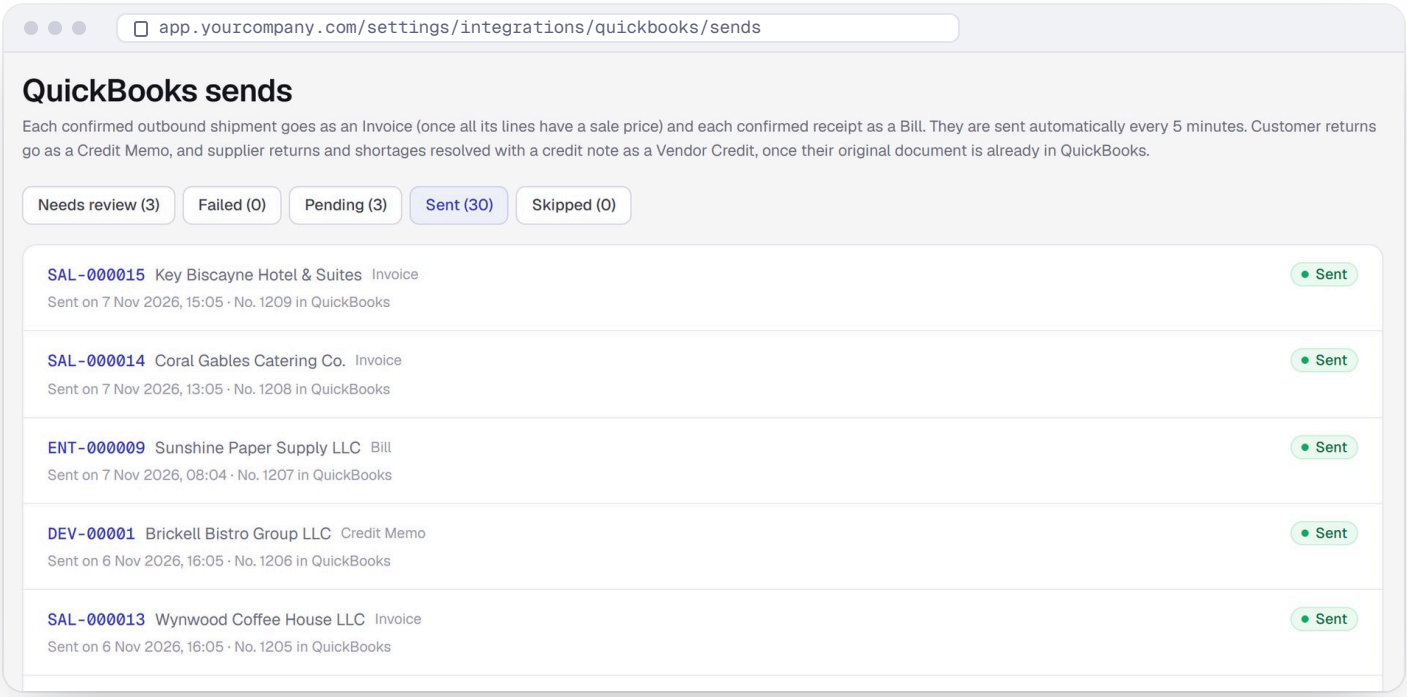

Real margin
Profitability by customer and product, net of returns.

06 ACCOUNTING WITHOUT DOUBLE ENTRY

Every shipment lands in your QuickBooks. Nobody types it again.

PivetTrack is the automated bridge between your warehouse and your books: every confirmed transaction reaches **your** QuickBooks Online as the matching accounting document. Your account stays yours, managed by your accountant.

Customer shipment	Supplier receipt	Customer return	Supplier return or shortage with a credit note
→ **Invoice**	→ **Bill**	→ **Credit Memo**	→ **Vendor Credit**

Real PivetTrack screenshot. Every document, with its QuickBooks number. Anything pending or needing review sits in its own tab, with the reason.

Your account, your accountant
The QuickBooks company, the chart of accounts and every accounting decision remain yours.

One direction only
PivetTrack creates the documents; it never changes or deletes what is already in QuickBooks.

No duplicates
Each document is sent exactly once; if QuickBooks does not answer, it waits in a queue and retries on its own.

Prices under lock
Once the invoice is sent, its prices are locked in PivetTrack, so the two systems never drift apart.

Everything in view
What was sent, what is pending and the reason for each error, on one screen.

Set up with your accountant
We connect your company, choose the accounts with your accountant and review the first documents together.

07 BUILT FOR THE WAREHOUSE FLOOR

Your whole warehouse on one screen. And in your picker's pocket.

Your team doesn't need to "be careful" when entering transactions: PivetTrack makes it **structurally impossible** to move goods without leaving a document behind.

Operations Center with traffic lights

Orders to approve, shipments to dispatch and open drafts, sorted by urgency with amber and red flags. What's urgent always comes first.

Built for phones and tablets

44 px glove-friendly buttons, no sideways scrolling and a sticky confirm bar within easy thumb reach.

Scan-to-pick

The picker scans the item or its case (EAN, UPC or ITF) with a phone or a handheld scanner. Skipping the scan requires an Administrator's co-signature.

Aisles and locations

On receiving, everything is put away to its aisle. Stock is tracked by location, every move leaves a record and each aisle can be blind-recounted.

Paperless inventory counts

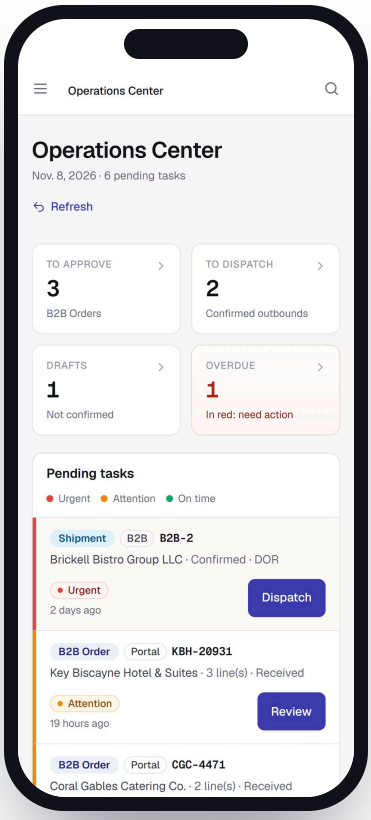

Line-by-line autosave, Excel upload and differences posted to the stock ledger automatically.

U.S. standards out of the box

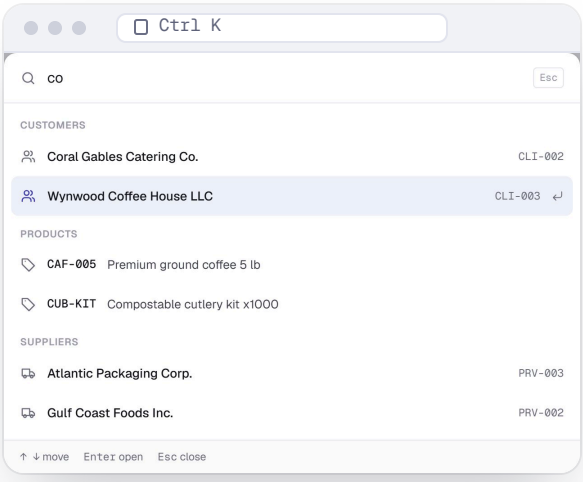

Receipts backed by a Packing Slip, BOL, Invoice or PO. Tax ID (EIN), U.S. state codes and validated ZIP codes.

Bilingual end to end

Each user picks English or Spanish: screens, Excel files and emails.

Real screenshot · phone, 390 px

Ctrl K global search: any SKU, customer or document in a second.

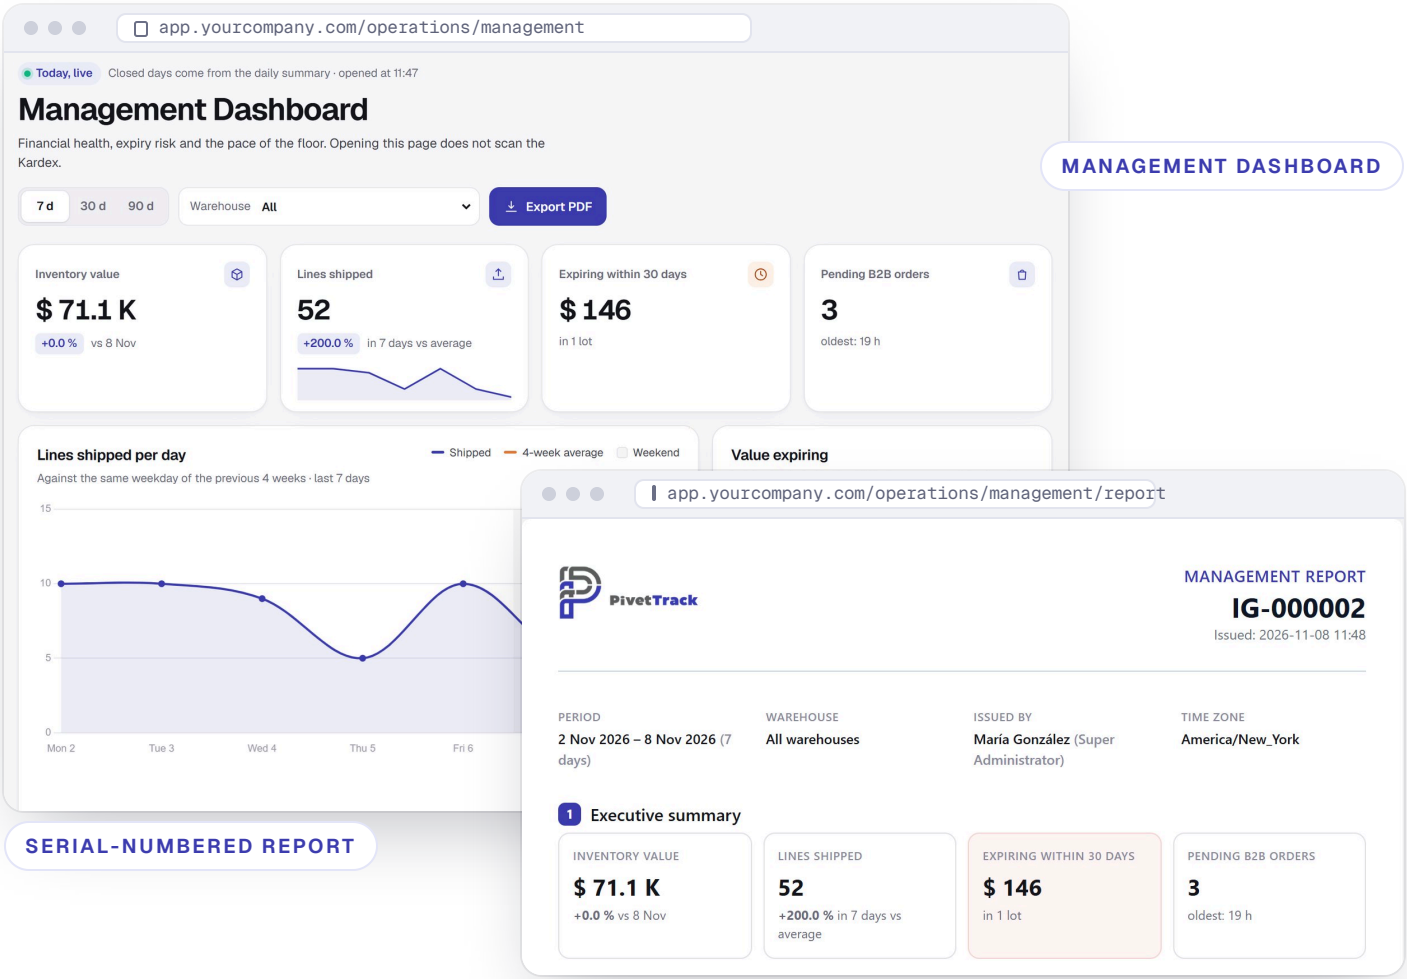

PLATFORM MODULES · PICK WHAT YOU NEED

- Lots, FEFO & recall
- Aisles & locations
- Scan-to-pick
- QuickBooks Online
- Receipts
- Shipments & dispatch
- B2B orders
- Customer returns
- Supplier returns
- Warehouse transfers
- Shrinkage with reasons
- Inventory counts
- Valued stock ledger
- Profitability
- List prices
- Excel import & export
- Each, case & pallet
- Users, roles & audit log

08 CONTROL FOR LEADERSHIP

Decide with today's numbers, not last month's.

What happens in the warehouse reaches management the same day: **inventory value, shipping pace, expirations and pending orders**, on a dashboard and in an audit-ready PDF report.

Real margin, net of returns

Sales, cost and margin by customer and by product. If a return arrives next month, it is netted against the original sale.

An audit-numbered report

"Export PDF" produces a Letter-size report with the same figures as the dashboard. Its serial number is logged in the audit trail: who issued it, when and with which filters.

Your costs never leave the company

Packing slips, the portal, the API and customer emails carry no amounts at all.

Indicators that warn you

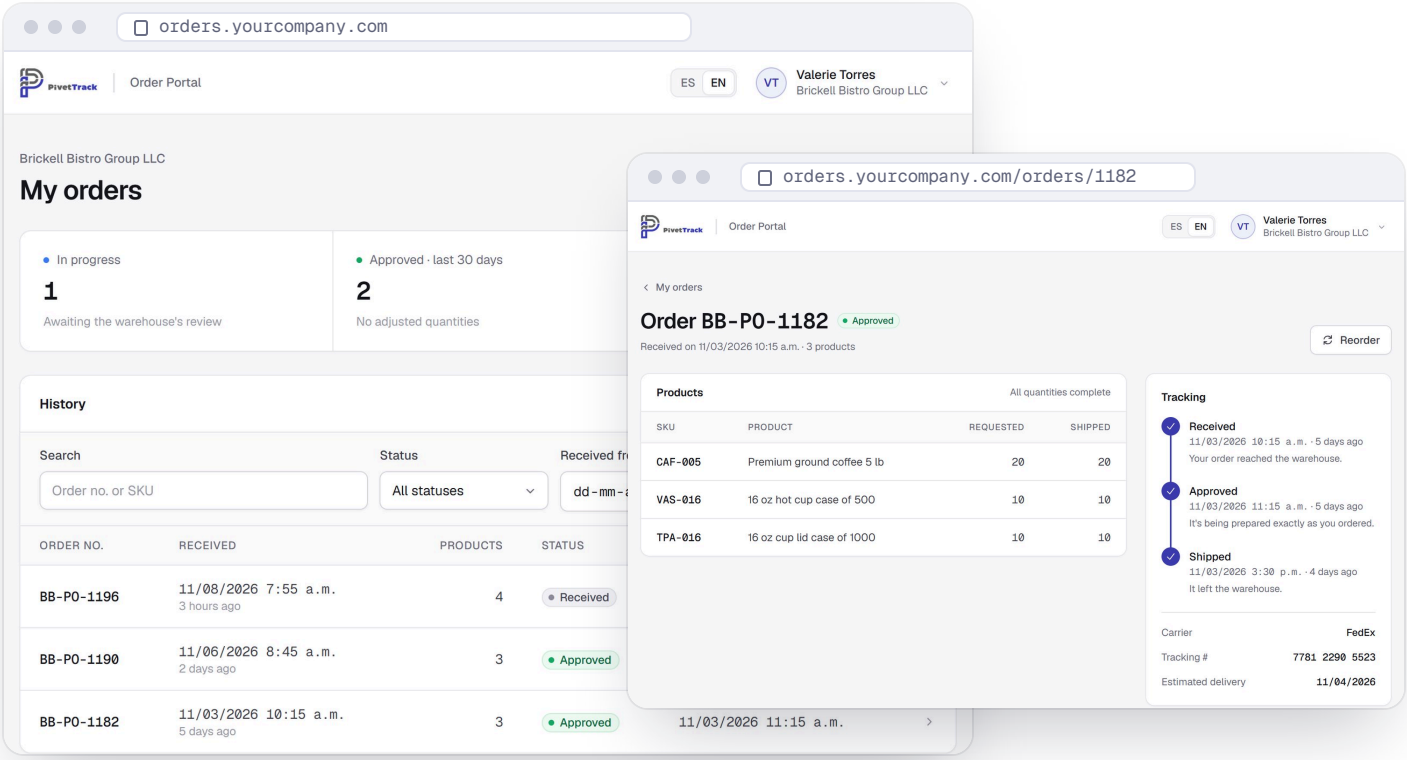

Inventory value and its weekly change, receipts pending over 48 h, and the status of QuickBooks and webhooks.

09 YOUR BRAND, OUR ENGINEERING

Your customers order on your branded portal. You ship without calls or spreadsheets.

The **B2B Ordering Portal** carries your logo, your brand color and your own subdomain. What your customers see is your company, modern and digital. What runs behind it is enterprise-grade engineering.

Your color, your logo and your address: `orders.yourcompany.com` · in English or Spanish, chosen by each buyer.

16 branded emails

In English or Spanish, per recipient: from order receipt to the shipping notice with tracking.

True self-service

Reorder, cancel while still pending review, filters and CSV export.

Your customers' SKUs

API orders accept each customer's own codes; PivetTrack maps them to yours.

Catalog per account

You decide which products each customer sees and how you sell them: by the each, case or pallet.

B2B API v1.4.0

Orders by the each, case or pallet, with idempotency; HMAC-signed webhooks with automatic retries.

Straight to operations

Every order lands in your Operations Center, ready to approve and ship.

10 TRANSPARENT PRICING

Two numbers. All on the table.

One-time fee, fixed monthly subscription: 8 or 25 users, 5,000 or 150,000 SKUs. **No per-user licenses, no servers to buy, no surprise charges.**

Implementation

ONE-TIME

$ 3,500

Paid upfront · live in 2 to 3 weeks

- A dedicated, isolated cloud instance, just for your company
- Your logo and brand on the interface and on every PDF document
- Assisted load of your full catalog from Excel or from your ERP export, with starting costs: no SKU cap
- Excel export of stock, stock ledger and inventory counts
- Two 2-hour virtual training sessions for your team
- Official user manual
- **Included:** QuickBooks Online setup with your accountant

Standard Plan

MONTHLY

$ 800 / mo

Fixed monthly fee · "SaaS Base" in the contract

- **Unlimited users**, no per-seat fees
- Every warehouse module, with lots, FEFO and recall
- Bulk imports and inventory closes in the background, with no SKU cap
- 99.9% monthly uptime in the contract (SLA), with service credits
- Up to 120 simultaneous users; p95 of up to 0.5 s in *picking*, with conditions (SOW, Exhibit C)
- Technical support per the SLA, with 24/7 response to critical incidents
- Automated backups and updates included
- **Included:** QuickBooks Online, run by us

Response times guaranteed by the SLA

Mon–Fri, 9 a.m.–6 p.m. ET, excluding U.S. federal holidays

CRITICAL	HIGH	MEDIUM	LOW
1 hour	**4 business hours**	**1 business day**	**2 business days**
24/7 · full outage or data loss	essential function down, no workaround	an error with a workaround	questions and feature requests

TRANSPARENT SCOPE · AGREED IN WRITING BEFORE YOU SIGN

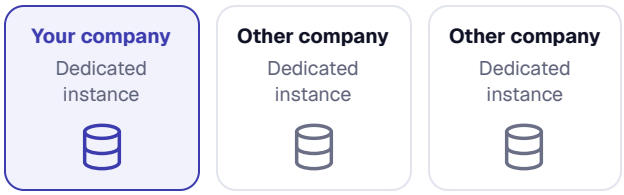

- **Enterprise Plan (built and quoted to order):** for sustained high concurrency: several bulk jobs at once, or routinely running 3 or more heavy reports at the same time. Adds job queues and dedicated processing servers, with priority support.
- **Quoted separately:** custom development, integrations with other systems (QuickBooks Desktop or another ERP), loading a second data source, and cleansing of source data.
- **B2B Portal, API and webhooks:** enablement and scope are defined in the formal proposal.

Prices in U.S. dollars, before taxes. As of October 2026, the SaaS subscription is not subject to Florida sales tax. Final terms and their validity are set in the formal proposal: the Statement of Work (SOW) and the Service Level Agreement (SLA).

11 YOUR OWN INSTANCE

A dedicated instance for your company. Your data never mixes with anyone else's.

You won't be "just another customer" on a server shared with hundreds of strangers. PivetTrack is **single-tenant**: **a dedicated application instance and a dedicated database** for your company. Your data is never stored alongside anyone else's, and your performance never depends on a neighbor.

99.9% uptime
In the contract (SLA), with service credits in your favor if we miss it.

Two-factor authentication
Required for administrators, with backup codes. On the B2B Portal, optional or required per customer.

Hardened accounts
Lockout after failed attempts, passwords of 12+ characters and automatic logout when idle.

Full audit trail
Who did what and when: every document, every cost change and every report issued, with its author.

Security kept current
Long-term-support (LTS) framework, automated dependency audits and a strict Content Security Policy (CSP).

Managed backups
Managed PostgreSQL with automated daily backups and restore.

The question isn't whether you can afford to switch. It's what every day without switching is costing you.

1 — 45 minutes

Diagnostic session
On your real operation, under an NDA: your SKUs, your volumes, your month-end close. We show you, in numbers, where you lose money today.

2 — Formal proposal

Scope that fits you
Statement of Work (SOW) and Service Level Agreement (SLA), in writing before we start.

3 — 2 to 3 weeks

Live under your brand
Your catalog loaded from Excel with each product's starting cost, and your team trained.

Book your diagnostic session

Email or call us and we'll set a date. We'll show you your own catalog running inside PivetTrack.
